Status	Finished
Started	Wednesday, 21 October 2026, 7:04 PM
Completed	Wednesday, 21 October 2026, 7:23 PM
Duration	19 mins 51 secs
Grade	**10.00** out of 10.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Write a Python program to count the frequency of each word in a given text file.

Description:

1. **Input:**
   - String as input.
2. **Output:**
   - A list of words with their corresponding frequency count to be write in a file "output.txt"

Example:

- **Input File Content:**

  apple orange apple banana apple orange

Output:

apple: 3
orange: 2
banana: 1

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`apple orange apple banana apple orange`	`apple: 3`
		`banana: 1`
		`orange: 2`

Answer: (penalty regime: 0 %)

```
import sys
import re
from collections import Counter

text = sys.stdin.read().strip()
words = re.findall(r'[a-z0-9]+', text.lower())
freq = Counter(words)

with open('output.txt', 'w') as f:
    for word in sorted(freq):
        f.write(f"{word}: {freq[word]}\n")
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r')`
	`as file:`
	`  text = file.read()`
	`  print(text)`
		`apple orange apple banana apple orange`	`apple: 3`
			`banana: 1`
			`orange: 2`
				`apple: 3`
				`banana: 1`
				`orange: 2`
					✓

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`Hello world! Hello everyone. Welcome to the world of programming.`	`everyone: 1`
			`hello: 2`
			`of: 1`
			`programming: 1`
			`the: 1`
			`to: 1`
			`welcome: 1`
			`world: 2`
				`everyone: 1`
				`hello: 2`
				`of: 1`
				`programming: 1`
				`the: 1`
				`to: 1`
				`welcome: 1`
				`world: 2`
					✓

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`One fish two fish Red fish blue fish`	`blue: 1`
			`fish: 4`
			`one: 1`
			`red: 1`
			`two: 1`
				`blue: 1`
				`fish: 4`
				`one: 1`
				`red: 1`
				`two: 1`
					✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **2**

Correct

Mark 1.00 out of 1.00

Develop a Python program to read a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to read.
2. **Output:**
   - The content of the specified line.

input1.txt:

Line one.
Line two.
Line three.
Line four.

For example:

Input	Result
input1.txt 3	Line three.

Answer: (penalty regime: 0 %)

```
import sys

data = sys.stdin.read().strip().splitlines()

if len(data) >= 2:
    filename = data[0].strip()
    try:
        line_no = int(data[1].strip())
    except:
        line_no = 1
    try:
        with open(filename, 'r') as f:
            lines = f.readlines()
        if 1 <= line_no <= len(lines):
            print(lines[line_no - 1].rstrip('\n'))
        else:
            print("Line not found")
    except FileNotFoundError:
        print("File not found")
elif len(data) == 1:
    try:
        line_no = int(data[0].strip())
        with open('input1.txt', 'r') as f:
            lines = f.readlines()
        if 1 <= line_no <= len(lines):
            print(lines[line_no - 1].rstrip('\n'))
    except:
        print("Line not found")
```

	Input	Expected	Got	
✓	input1.txt 3	Line three.	Line three.	✓

	Input	Expected	Got	
✓	input2.txt 3	Line C.	Line C.	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **3**

Correct

Mark 1.00 out of 1.00

Create a Python program to find the longest word in a text file.

- **Input:**
  - A text file containing multiple lines of text.
- **Output:**
  - The longest word in the file.

For example:

Input	Result
input1.txt	Longest word: containing

Answer: (penalty regime: 0 %)

```
import sys
import re

data = sys.stdin.read().strip().splitlines()

filename = data[0].strip() if data else "input1.txt"

try:
    with open(filename, 'r') as f:
        text = f.read()
except FileNotFoundError:
    text = "\n".join(data)

words = re.findall(r'[A-Za-z0-9]+', text)

if words:
    longest = max(words, key=len)
    print(f"Longest word: {longest}")
else:
    print("Longest word: ")
```

	Input	Expected	Got	
✓	input1.txt	Longest word: containing	Longest word: containing	✓
✓	input2.txt	Longest word: thousand	Longest word: thousand	✓
✓	input3.txt	Longest word: supercalifragilisticexpialidocious	Longest word: supercalifragilisticexpialidocious	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **4**

Correct

Mark 1.00 out of 1.00

Write a Python program to append a new line at a specific position in a text file, shifting existing lines down.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to insert the new line at.
   - New content for the new line.
2. **Output:**
   - The updated file with the new line inserted at the specified position, shifting the existing lines down in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  3

  Inserted line..

Output:

Line one.
Line two.
Inserted line.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`3`
	`Inserted line.`
		`Line one.`
		`Line two.`
		`Inserted line.`
		`Line three.`
		`Line four.`

Answer: (penalty regime: 0 %)

```
import sys

data = sys.stdin.read().splitlines()

if len(data) >= 3:
    filename = data[0].strip()
    try:
        line_no = int(data[1].strip())
    except:
        line_no = 1
    new_line = "\n".join(data[2:])
    try:
        with open(filename, 'r') as f:
            lines = f.read().splitlines()
    except FileNotFoundError:
        lines = []

    if line_no < 1:
        line_no = 1
    if line_no > len(lines) + 1:
```

```
        line_no = len(lines) + 1

lines.insert(line_no - 1, new_line)

with open('output.txt', 'w') as f:
    for line in lines:
        f.write(line + "\n")
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		3
		Inserted line.
			Line one.
			Line two.
			Inserted line.
			Line three.
			Line four.
				Line one.
				Line two.
				Inserted line.
				Line three.
				Line four.
					✓

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		4
		Inserted line D.
			Line A.
			Line B.
			Line C.
			Inserted line D.
				Line A.
				Line B.
				Line C.
				Inserted line D.
					✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **5**

Correct

Mark 1.00 out of 1.00

Develop a Python program to copy the contents of one file to another file.

Description:

1. **Input:**
   - Source file and destination file names.
2. **Output:**
   - The content of the source file copied to the destination file.

For example:

Test	Input	Result

`with open('output1.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`output1.txt`
		`This is the source file.`
		`It contains multiple lines of text.`
		`Here is another line.`

Answer: (penalty regime: 0 %)

```
import sys

data = sys.stdin.read().strip().splitlines()

if len(data) >= 2:
    src = data[0].strip()
    dst = data[1].strip()
elif len(data) == 1:
    src = data[0].strip()
    dst = 'output1.txt'
else:
    src = 'input1.txt'
    dst = 'output1.txt'

try:
    with open(src, 'r') as f:
        content = f.read()
    with open(dst, 'w') as f:
        f.write(content)
except FileNotFoundError:
    print("File not found")
```

	Test	Input	Expected	Got	

✓	`with open('output1.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input1.txt`
		`output1.txt`
			`This is the source file.`
			`It contains multiple lines of text.`
			`Here is another line.`
				`This is the source file.`
				`It contains multiple lines of text.`
				`Here is another line.`
					✓

✓	`with open('output2.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input2.txt`
		`output2.txt`
			`Hello, world!`
			`Python programming is amazing.`
			`Let's copy this text to another file.`
				`Hello, world!`
				`Python programming is amazing.`
				`Let's copy this text to another file.`
					✓

✓	`with open('output3.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input3.txt`
		`output3.txt`
			`Single line.`	`Single line.`	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **6**

Correct

Mark 1.00 out of 1.00

Create a Python program to delete a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to delete.
2. **Output:**
   - The updated file with the specified line removed in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`2`
		`Line one.`
		`Line three.`
		`Line four.`

Answer: (penalty regime: 0 %)

```
import sys

data = sys.stdin.read().splitlines()

if len(data) >= 2:
    filename = data[0].strip()
    try:
        line_no = int(data[1].strip())
    except:
        line_no = 1
else:
    filename = 'input1.txt'
    line_no = 1

try:
    with open(filename, 'r') as f:
        lines = f.read().splitlines()
except FileNotFoundError:
    lines = []

if 1 <= line_no <= len(lines):
    del lines[line_no - 1]

with open('output.txt', 'w') as f:
    for line in lines:
        f.write(line + "\n")
```

```
        f.write(line + '\n')
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		2
			Line one.
			Line three.
			Line four.
				Line one.
				Line three.
				Line four.
					✓

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		3
			Line A.
			Line B.
				Line A.
				Line B.
					✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **7**

Correct

Mark 1.00 out of 1.00

Develop a Python program to identify and print all palindrome words from a given text file.

Description:

1. **Input:**
   - A text file containing multiple words.
2. **Output:**
   - A list of palindrome words found in the file name as 'output.txt'.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt	madam
		arora
		malayalam

Answer: (penalty regime: 0 %)

```
import sys
import re

data = sys.stdin.read().strip().splitlines()
filename = data[0].strip() if data else "input1.txt"

try:
    with open(filename, 'r') as f:
        text = f.read()
except FileNotFoundError:
    text = "\n".join(data)

Marks for this submission: 1.00/1.00.

Question **8**

Correct

Mark 1.00 out of 1.00

Develop a Python program to read a text file and count the total number of words in the file.

Description:

1. **Input:**
   - A text file containing several lines of text.
   - File name you should get as input.
2. **Output:**
   - The total number of words in the file.

For example:

Input	Result
input2.txt	Total words: 14
input3.txt	Total words: 15

Answer: (penalty regime: 0 %)

```
import sys

data = sys.stdin.read().strip().splitlines()
filename = data[0].strip() if data else "input1.txt"

try:
    with open(filename, 'r') as f:
        text = f.read()
except FileNotFoundError:
    text = "\n".join(data)

words = text.split()
print(f"Total words: {len(words)}")
```

	Input	Expected	Got	
✓	input1.txt	Total words: 6	Total words: 6	✓
✓	input2.txt	Total words: 14	Total words: 14	✓
✓	input3.txt	Total words: 15	Total words: 15	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **9**

Correct

Mark 1.00 out of 1.00

Create a Python program to write to a specific line in a text file, replacing the existing content of that line.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to write to.
   - New content for the specified line.
2. **Output:**
   - The updated file with the specified line replaced by the new content in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Updated line two.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`2`
	`Updated line two.`
		`Line one.`
		`Updated line two.`
		`Line three.`
		`Line four.`

Answer: (penalty regime: 0 %)

```
import sys

data = sys.stdin.read().splitlines()

if len(data) >= 3:
    filename = data[0].strip()
    try:
        line_no = int(data[1].strip())
